Atheryon — S&P Global Data Integration

Confidential pitch pack · May 2026

S&P data is only as valuable as your ability to operationalise it

Atheryon is the integration partner for S&P Global clients who need to turn fragmented enterprise data systems into trusted, AI-ready workflows — using S&P's own **TeraHelix** data-modelling platform.

The problem

Most institutions have invested heavily in data — and still cannot trust it. Definitions diverge across front, middle, and back office. Pipelines break silently. AI initiatives launch on top of foundations that were never integrated in the first place.

- **Fragmented data systems.** Multiple platforms, inconsistent semantics, no shared model. Every team holds a different version of the truth.
 - **AI on broken foundations.** Generative AI inherits whatever the data layer hands it. Without governed integration, AI outputs are unreliable from day one.
 - **Slow time to insight.** Each new question becomes a new project. Reconciliation work crowds out the analytical work that produced the investment in the first place.
-

The specialism — an integration specialist for S&P Global clients

Twenty years inside tier-1 banks — Credit Suisse, Commonwealth Bank, Westpac, Barclays — building the data foundations that risk, finance, regulatory reporting, and trade surveillance run on. Atheryon brings that experience to S&P Global's enterprise clients: aligning their internal data estate with S&P's data products, so insight ships in weeks instead of quarters.

1. **Model first, transport second.** Integration is a modelling problem, not a pipes problem. Get the semantic model right and the pipelines look after themselves.
2. **Governance built in.** Lineage, ownership, and controls are part of the data product — not bolted on after deployment.
3. **Production by default.** Every engagement leaves a regulator-credible, deployable platform behind. Not a slide deck. Not a prototype.

The leverage — TeraHelix

In June 2025, S&P Global completed its acquisition of **TeraHelix**, integrating it into the Enterprise Data Organization. TeraHelix is the technology that lets S&P link datasets across asset classes, platforms, and storage architectures — and it powers **Gearbox**, S&P’s LLM-driven data-linking solution. For S&P’s clients, TeraHelix is the lever that turns S&P data into integrated, AI-ready workflows inside their own estate.

Capability	What it delivers
Enterprise-scale data modelling	Frameworks that structure data models for interoperability across diverse platforms, systems, and storage architectures.
Cross-dataset linking	Link S&P reference, market, ESG, and ratings data to internal trade, position, and customer data — with the lineage to prove it.
AI-ready foundations	Structured, governed data models are what generative AI actually needs. TeraHelix provides them; Atheryon operationalises them.

Why now

Bloomberg and MSCI are deploying AI-driven data tools. The major data providers are racing to embed AI into their products. The differentiator for institutional clients is no longer *which data they buy* — it is *how quickly they can integrate that data* into the decision surfaces their teams already use. Atheryon’s role is to compress that integration cycle for S&P Global clients, leaning on TeraHelix as the modelling backbone.

Outcomes

- **Smoother data workflows** — fewer reconciliation cycles, fewer tickets, lower run cost
- **Faster insights** — analysts ask new questions of S&P data without engineering tickets
- **AI initiatives that hold up** — generative AI grounded in governed, lineage-tracked data
- **A platform regulators believe** — controls and provenance built in from the first sprint

Three engagement modes

01 — INTEGRATION DIAGNOSTIC · 30 DAYS

Assessment of how your data estate aligns with S&P data products. Concrete integration plan, sequenced by business value, scoped against TeraHelix capabilities.

02 — PROTOTYPE SPRINT · 6 WEEKS

Working integration of one S&P dataset into a target decision surface — analyst desk, risk view, regulatory submission, or AI pilot.

03 — PLATFORM ENGAGEMENT · 2+ QUARTERS

Integrated, governed data platform that lets S&P data flow into every part of the business that needs it. Senior-led delivery throughout.

Disclosure

Atheryon is an independent advisory practice. References to S&P Global, TeraHelix, Gearbox, Bloomberg, and MSCI are factual context about the market in which we operate; Atheryon is not affiliated with, endorsed by, or partnered with any of these organisations.
